

核数据重点实验室

R&D of Test Platform for PandaX-III

Lei Chen, Shouyang Hu & Xiaomei Li

On the behalf of CIHENP team of CIAE:

Xiaomei Li, Shouyang Hu, Jing Zhou,

Lei Chen, Wendi Liu, Yu Zhi, Mingrui Zhao,

Peiyu Li, Shihai Jia, Yunyu Zhang

China Institute of Atomic Energy

2019/10/17

Outline

- PandaX-III Experiment and NLDBD
- Test Platform and subsystem
- Preliminary test of Bulk MicroMegas with the Platform
- Conclusion and Future Plan

Outline

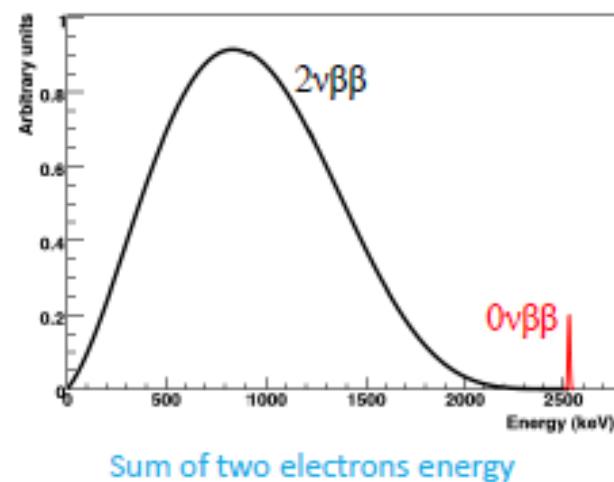

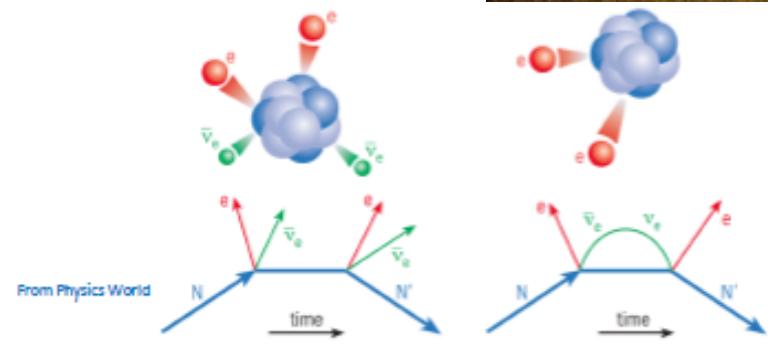

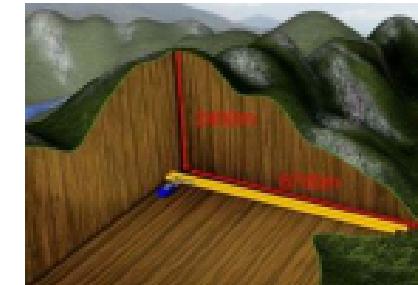

- **PandaX-III Experiment and NLDBD**
- Test Platform and subsystem
- Preliminary test of Bulk MicroMegas with the Platform
- Conclusion and Future Plan

PandaX-III Experiment

- Aim at neutrinoless double beta decay ($0\nu\beta\beta$) event
 - Explore nature of neutrino, Majorana or Dirac
 - Test number conservation of lepton
 - Measure the neutrino mass
- Request
 - Low background radiation
 - Enough material. Ton at least
 - Good energy resolution
 - Track discrimination.
- The mission of CIAE:
 - Readout detector (MicroBulk MicroMegas) assembly, test and QA on PandaX –III TPC

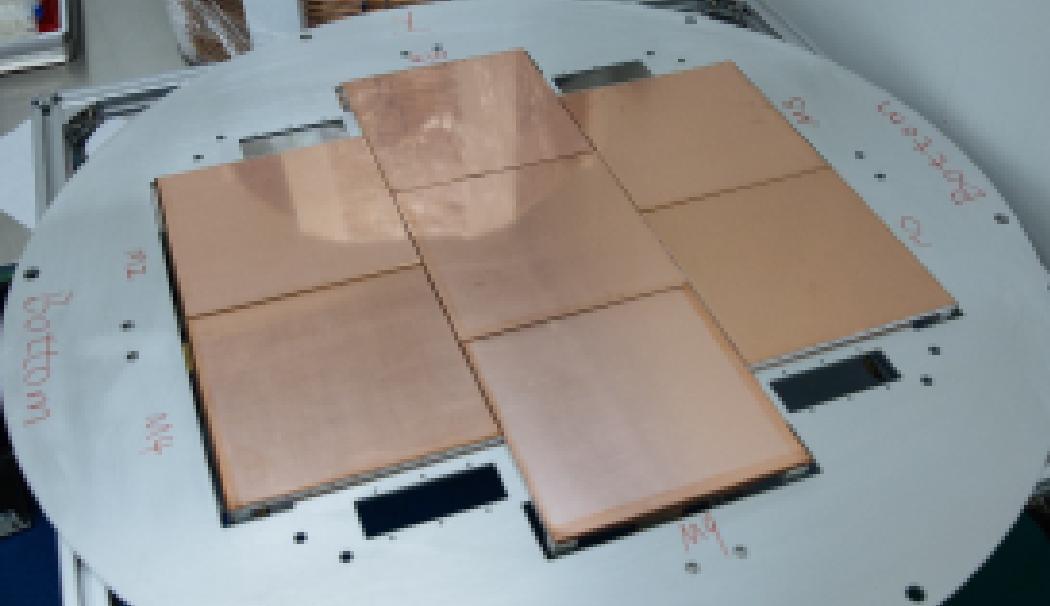

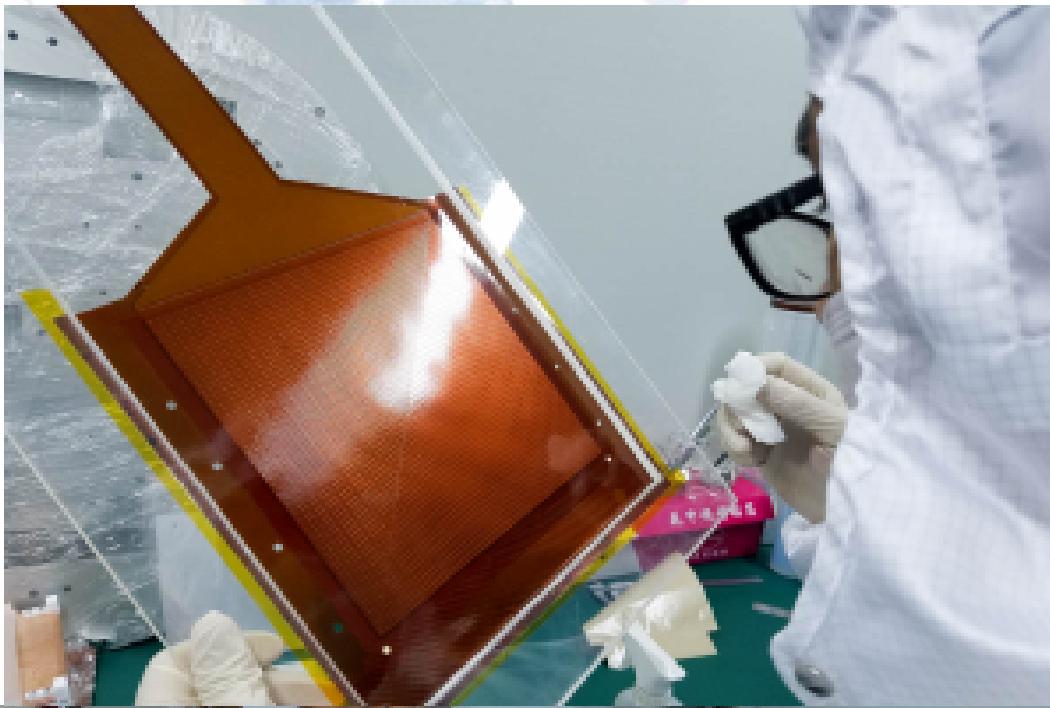

Main work

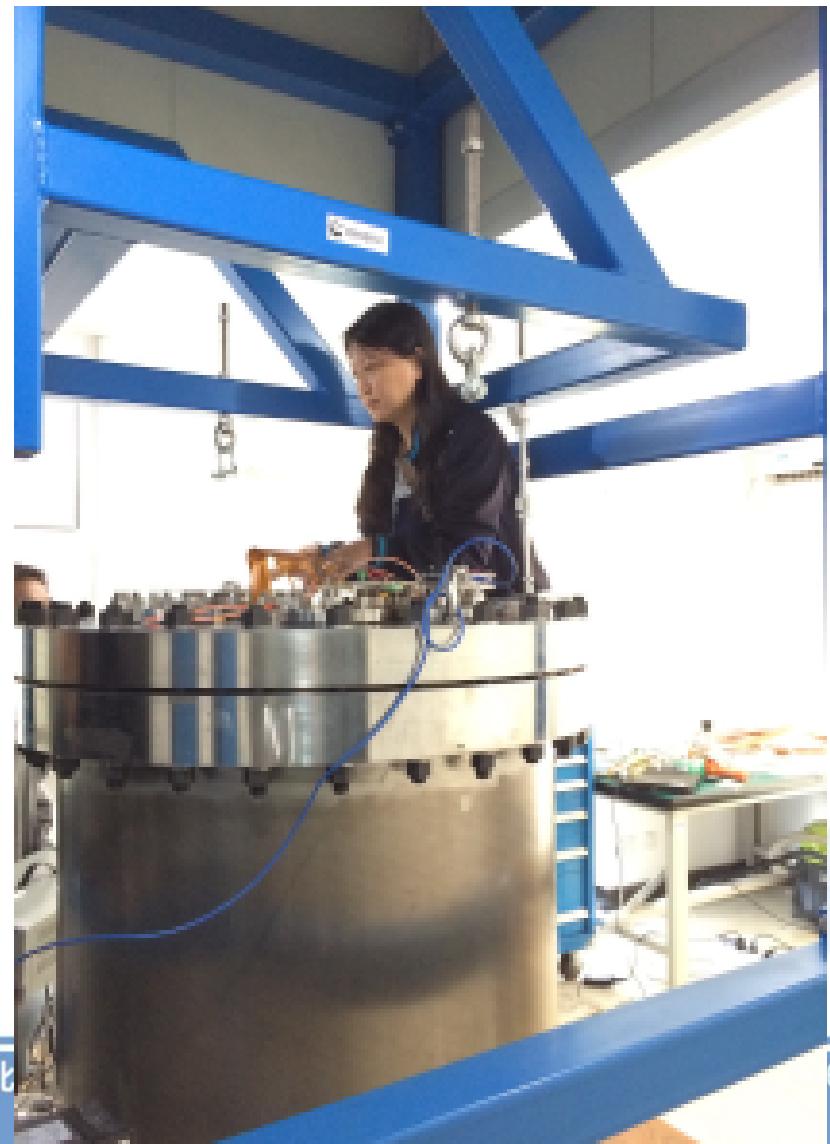

- **Install and test prototype TPC**
 - Test Prototype TPC
 - Bad channel check
 - gain curve
- **Install and test MINI TPC gas system**
- **Build MicroMegas detector test platform**
 - Electromagnetic Compatibility
 - Data analysis program
 - Test chamber

Installing 7 MM modules

PandaX-III TPC Prototype

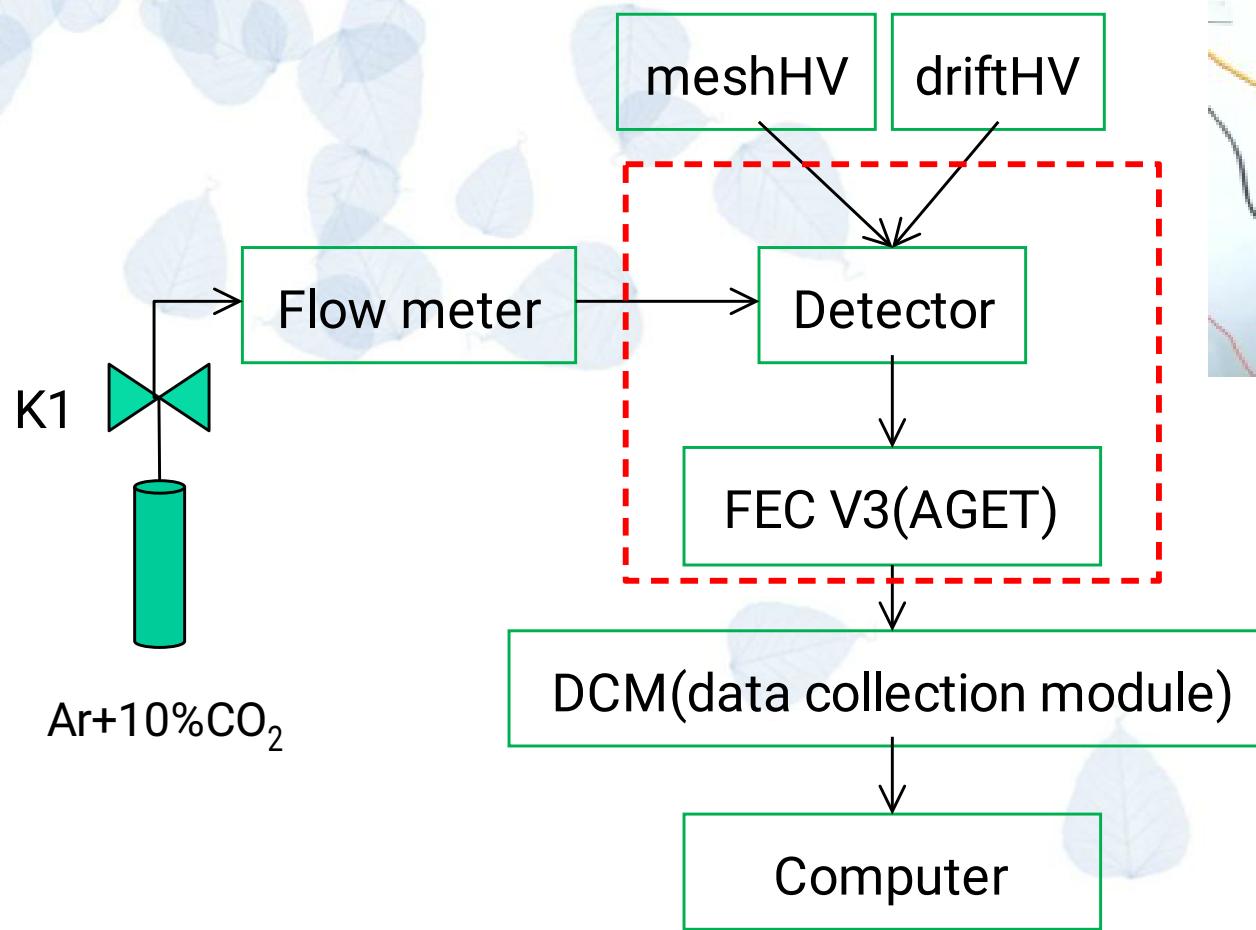

Outline

- PandaX-III Experiment and NLDBD
- Test Platform and subsystem
- Bulk MicroMegas Test with the Platform
- Conclusion and Future Plan

Test Platform and subsystem

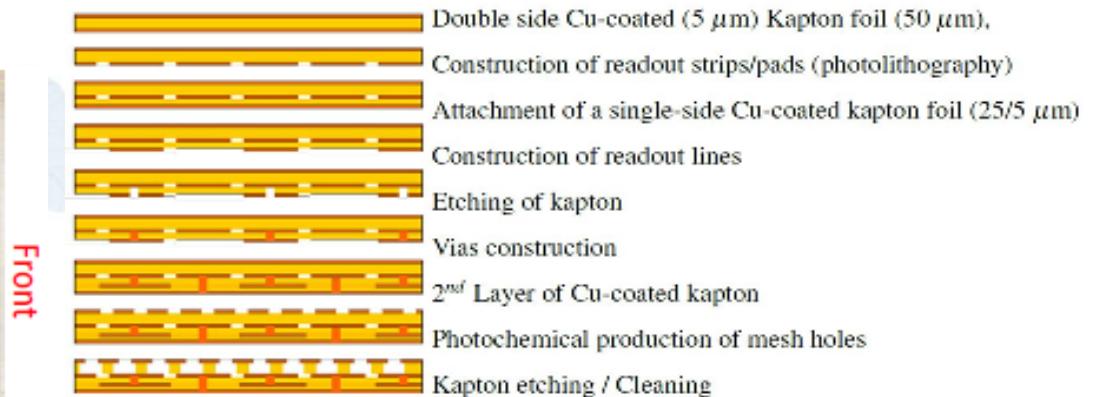

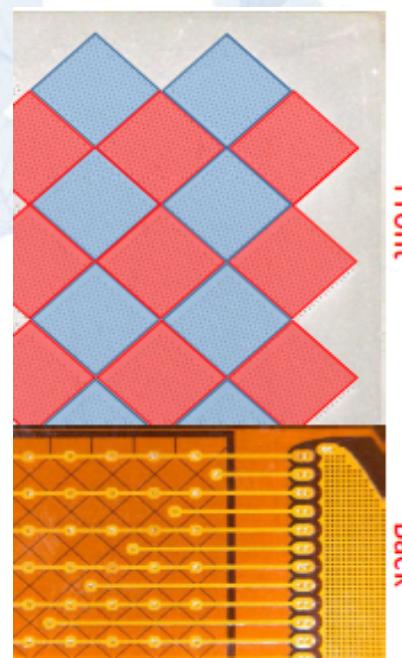

PandaX-III MM Test Box at CIAE

北京市275信箱46分箱 邮编102413 电话69357849 传真69357787

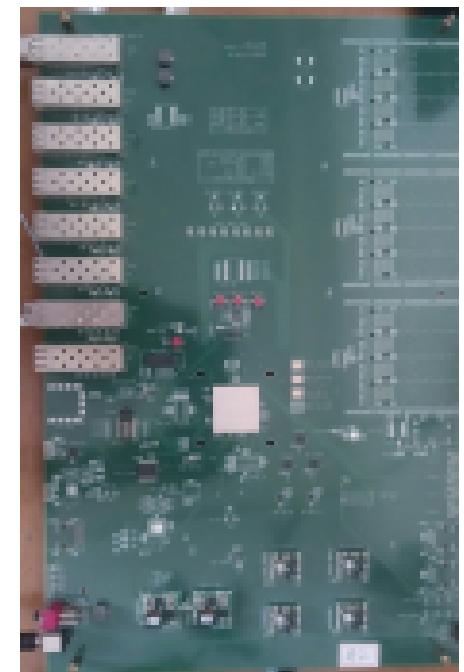

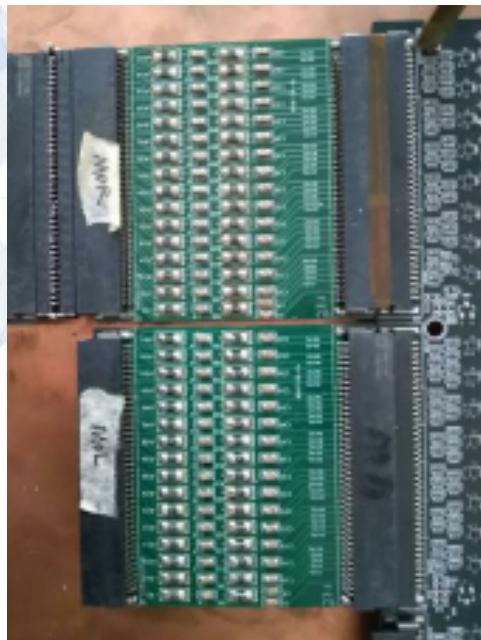

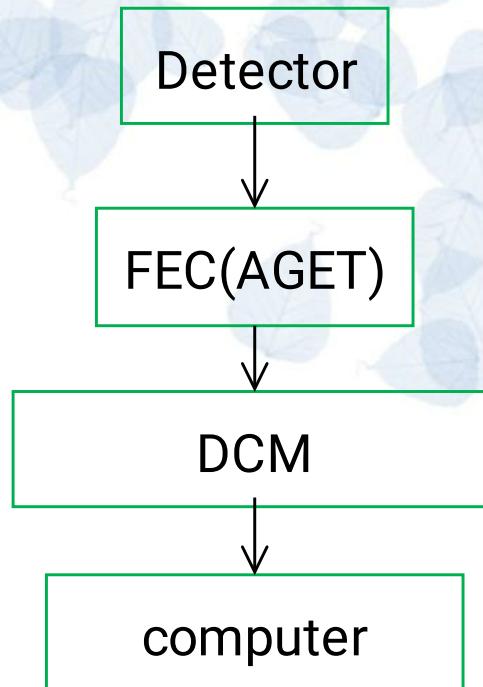

Tested Detector of MM

Parameter of Bulk MicroMegas
Total channel: 128channels
Amplify gap: 50 μm
Drift distance:1 cm
Effective Area:20cm*20cm

Universal Readout Electronic

Adapt board, FEC V3(front end card),Data collection module are made by USTC

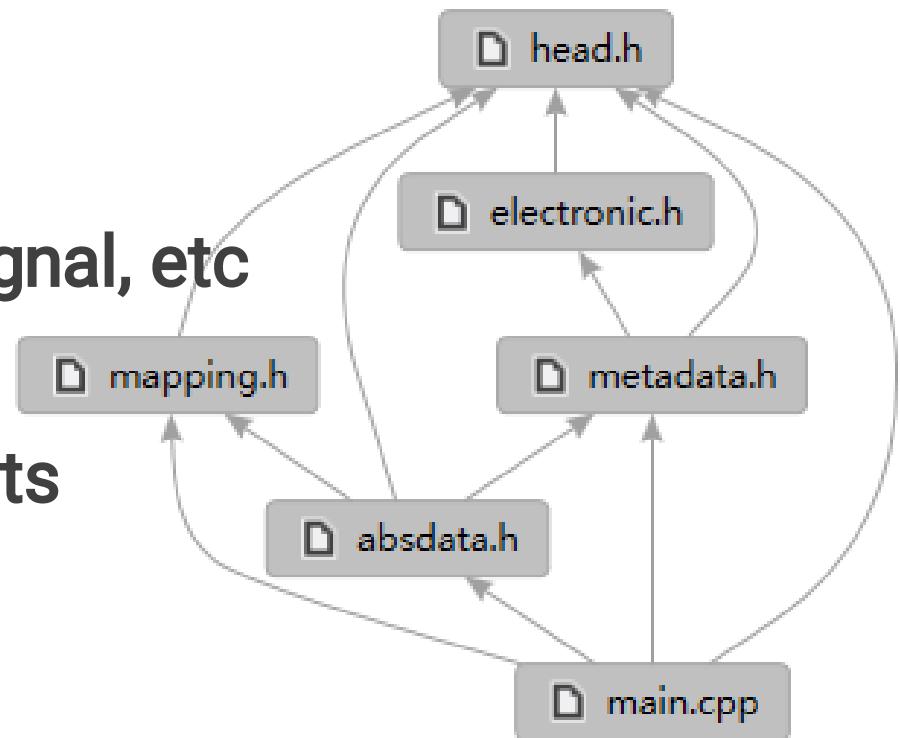

Data Analysis program

➤ Metadata.h

- read and check raw data
- Calculate baseline, RMS of signal, etc

➤ Absdata.h

- Reconstruct raw data to events
- Obtain center of an charge
- Get amplitude of an event

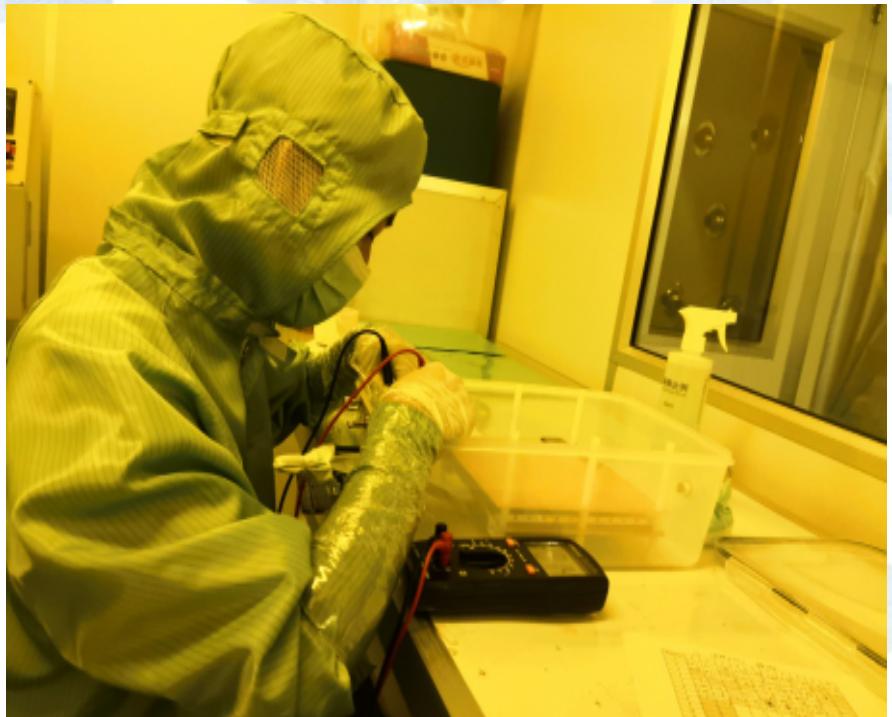

Seal and Gas Substitution

- Seal
 - Hot Melt
 - silicon oil
 - Rubber ring
- Calculation for gas substitution
$$t = -V * \ln(P) / I$$
 - V=9L I=1L/min P=0.1%
 - t=1hour

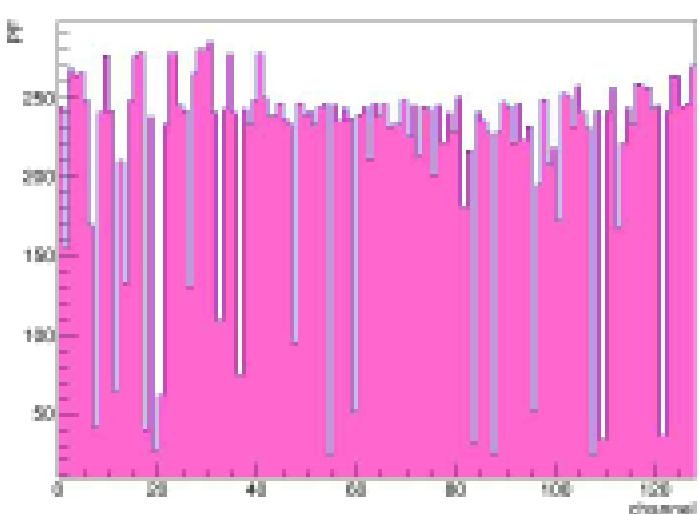

Bad channel check

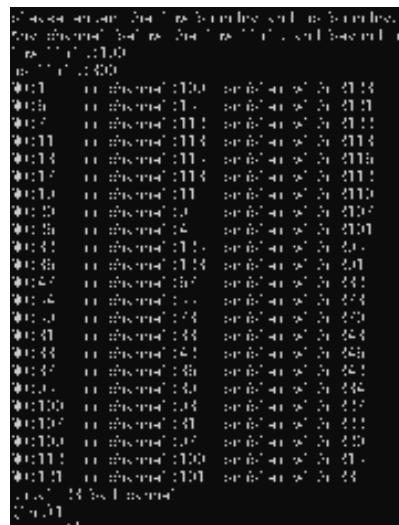

北京市275信箱46分箱 邮编102413 电话69357849 传真69357787

Bad channel check

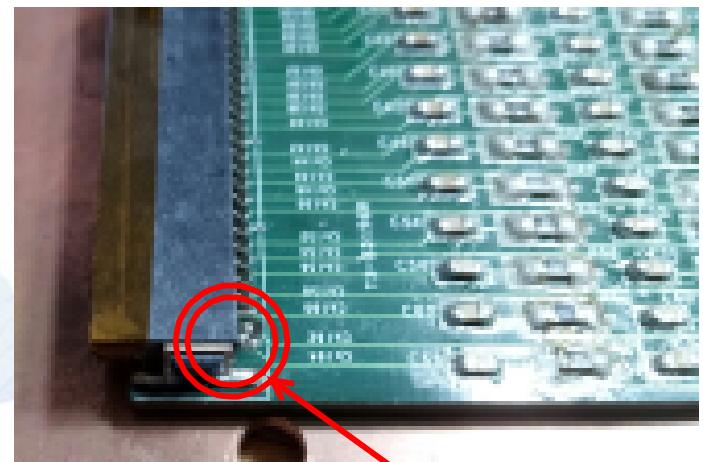

- Abnormal capacitance
 - Current leakage
 - Connection problem

Capacitance distribution of Micropix MicroMegas

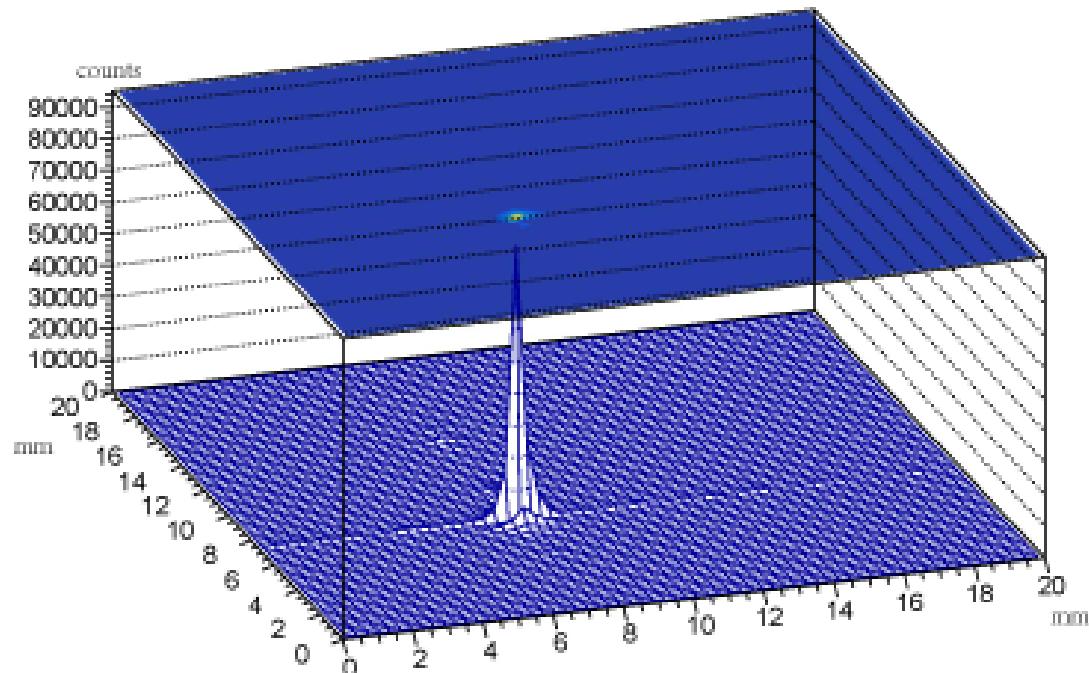

Current distribution of MM on Mesh HV=300V

Disconnected pin on adapt board

Hitmap of Microbulk MicroMegas with 55Fe Source

- MM: 20cm*20cm
- Ar+ 10%CO₂
- Mesh HV: -370V
- Drift HV:-1500V
- Flowing gas

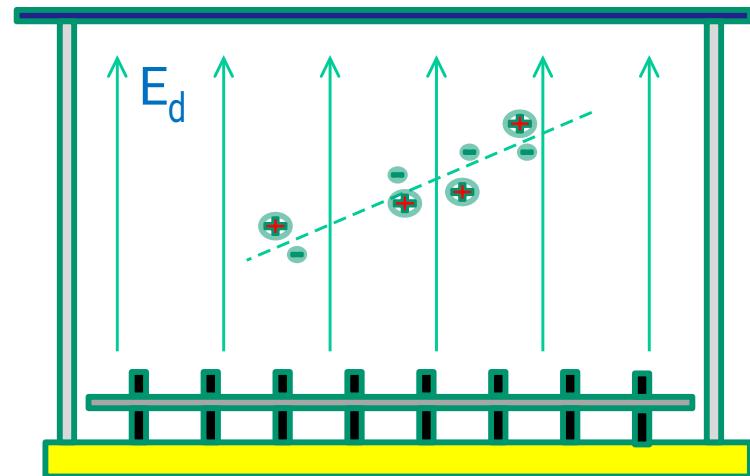

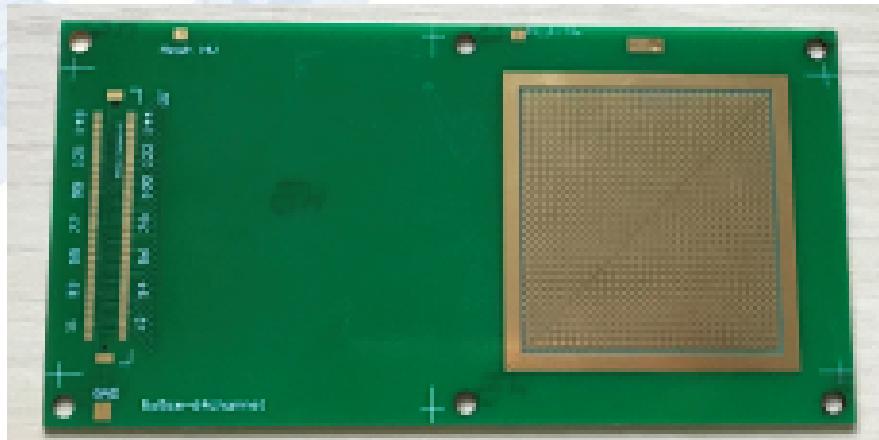

Outline

- PandaX-III Experiment and NLDBD
- Test Platform and subsystem
- **Preliminary test of Bulk MicroMegas with the Platform**
- Conclusion and Future Plan

北京市275信箱46分箱 邮编102413 电话69357849 传真69357787

Tested Detector of Bulk MicroMegas

Parameter of Bulk MicroMegas

Total channel: 64 channels

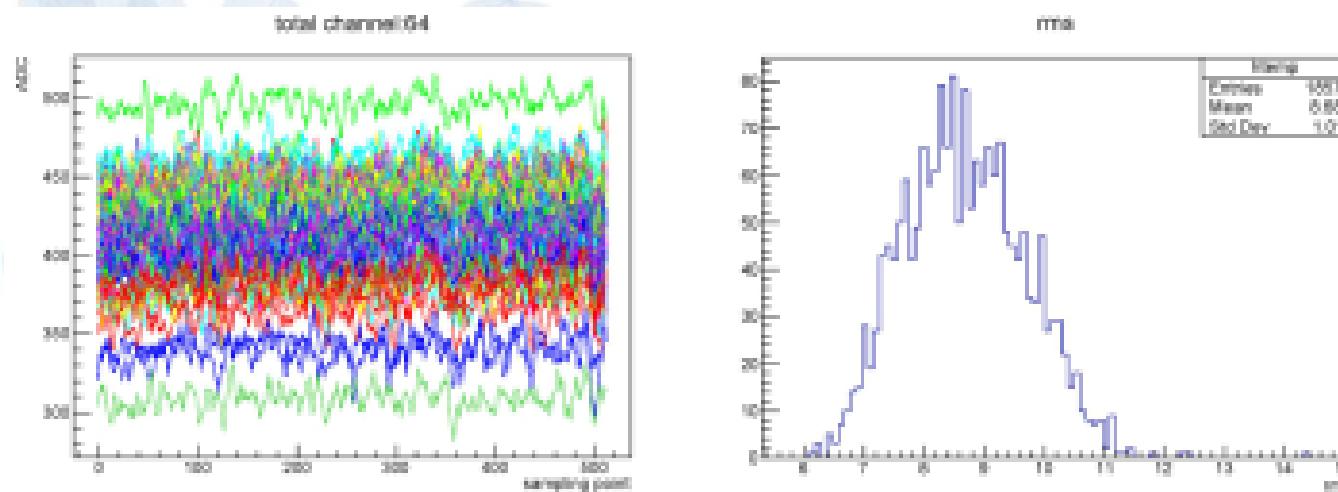

Amplify gap: 128 μm

Drift distance: 1 cm

Effective Area: 5cm*5cm

Noise Level

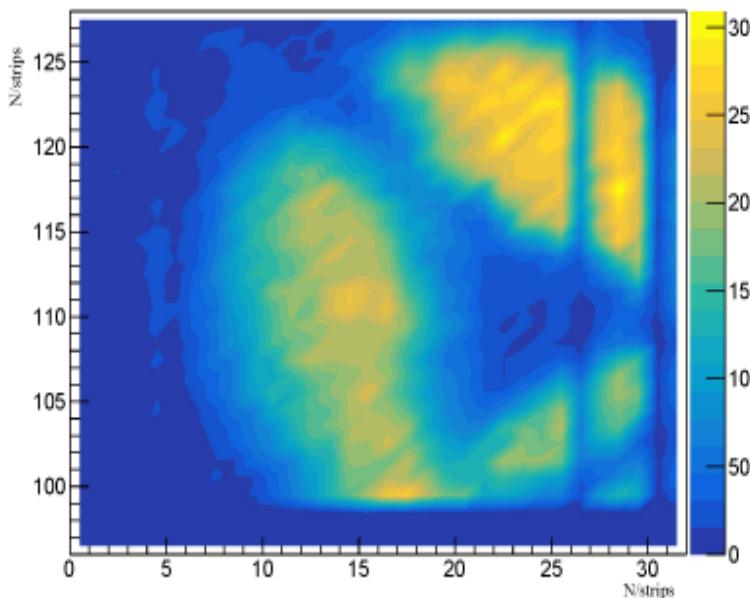

Left: Noise of detector. Right: RMS of detector system

Sampling rate: 5MHz
4096ADC <==> 120fC<==> 12bit
ENC: 9ADC

Image of key

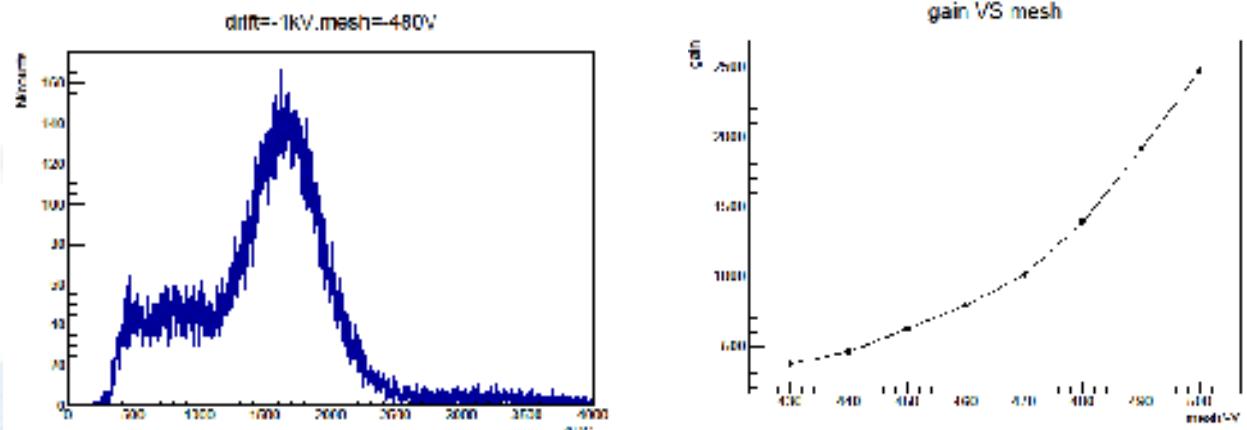

- Bulk MicroMegas: 5cm*5cm
- Ar+ 30%CO₂
- Mesh HV: -550V
- Drift HV:-2500V
- 50kV X-Ray tube

it shows key was taken by Bulk MicroMegas under X-Ray .
X-axis and Y-axis is strip number, Both of them have 32 channels.

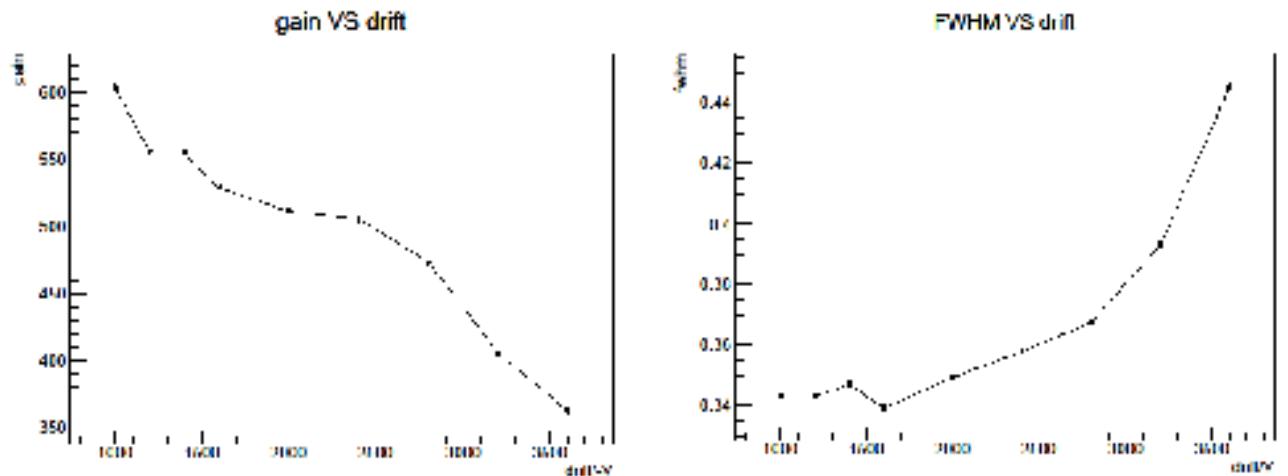

Energy Spectrum and Gain

- 55Fe 5.9keV
- Ar+10%CO₂
- Highest gain: 2000
- Energy resolution: 33%

Energy spectrum and gain curve on Drift HV=-1kV

Gain and energy resolution on Mesh HV=-450V

北京市275信箱46分箱 邮编102413 电话69357849 传真69357787

Conclusion and Future Plan

➤ Conclusion

- Build a detector test platform for PandaX-III experiment
- Developed capacitance and resistance automatic testing system
- Get Hitmap of Microbulk MicroMegas with ^{55}Fe Source
- Preliminary test of Bulk MicroMegas with the Platform

➤ Future Plan

- Design new structure to test more MicroMegas in one time
- Build a new gas system
